Project Design Phase-II Technology
Stack (Architecture & Stack)

|	
Team ID	PNT2022TMID38453
Team Leader	Mahalakshmi.S (413019104023)
Team member	Jayakumar.V (413019104014), Malavika.D (413019104025), Monika.D (413019104026), Premkumar.K (413019104030)
Project Name	Project – Digital Naturalist - AI enabled tool for biodiversity researchers
Maximum Marks	4 Marks

Technical architecture :

Image dataset stored and managed using MongoDB

dataset pre-processing and fetching performed using IBM Watson assistant

Data Augmentation

Train set

CNN algorithm

Model evaluation

Test set

Input obtained and managed using ibm watson service

User securely logs in using a authentication api gives the required data

Web app created using React.js

Final Model stored on cloud foundry

Prediction

Table-1 : Components & Technologies:

S.No	Characteristics	Description	Technology
1.	Open-Source Frameworks	Application is built by using flask	WSGI framework (Web Server Gateway Interface)
2.	Security Implementations	For authenticating the user data and protecting the data about species in database	SHA-256 and Encryptions
3.	Scalable Architecture	To scale our application in server side by supporting clients including desktop browsers, mobile browsers etc	IBM Auto Scaling
4.	Availability	To make application available both online and offline and also 24/7 service.	IBM Cloud load balancer
5.	Performance	Designing an application that can handle wide range of requests at a time without any delay and to provide accuracy in prediction	IBM instance

Table-2: Application Characteristics:

S.No	Component	Description	Technology
1.	User Interface	Web UI or Website or Web app	HTML, CSS, React.js
2.	Application Logic-1	Model building and training	Python
3.	Application Logic-2	Getting image or text data from user for prediction	IBM Watson STT service
4.	Application Logic-3	Fetch the relevant data from the database and project them to user	IBM Watson Assistant
5.	Database	Image and text data of all the species along with detailed view of each species	NoSQL (MongoDB)
6.	Cloud Database	Fetch data from database and feed them to model for prediction and also used to retrieve the data required for user.	IBM Cloudant
7.	File Storage	Image data, login credentials, code (backend and frontend) and API keys	IBM Block Storage
8.	External API-1	To get data from the database when user give the image input	IBM Storage API
9.	External API-2	To get the username and password of the specific user	Secure Authentication API
10.	Machine Learning Model	To predict the species (flora or fauna) through the image input and also it gives detailed view of the particular species	Species detection and identification model

11.	Infrastructure (Server / Cloud)	To deploy our application in cloud server	Cloud Foundry
